

Amendments to the Specification

Please amend the last paragraph of page 7 of the Specification as follows:

Clamping member 18 can have relief volumes such as annular volume 15 machined into its contact surface with electrical device 14 to accommodate the shape of the top surface of device 14. In the arrangement shown, machined volume 15 prevents member 18 from touching the electrical contacts at the top of device 14 that would otherwise be harmed by the pressure of the clamping member against the electrical device. Similarly, the lower surface 21 of member 20 can itself define relief volumes 50.
